HYPER-REALISTIC TRAINING™

STRATEGIC OPERATIONS uses the "magic of Hollywood" to create Hyper-Realistic™ training scenarios. Located on the lot of Stu Segall Productions, San Diego's only full-service TV and movie studio, this 20 acre facility is managed and operated by highly trained tactical operators.

Design experts and public safety officials join movie industry professionals to create a state-of-the-art, next generation tactical training environment unique in the U.S.

Special effects artists create realistic weapons effects and explosions, including rocket propelled grenades (RPGs), mines, and improvised explosive devices (IEDs). Smoke, noise, and explosions add the highest level of realism safely, and simulate the "fog of war."

Special effects wound makeup artists create dozens of extremely realistic wounds and simulations that give military medical personnel rigorous trauma care training under realistic combat operations in the field and at the fully-furnished field medical facilities.

A digital audio and video system with cameras and microphones throughout the facilities allow monitoring, recording, playback, and analysis of all the action for after-action review on large screens in classrooms or at remote locations. Training officers can take away DVD recordings of training sessions.

A Defense Science Board task force found that the probability of being a casualty decreases from fifty percent during the first few "decisive combats" experienced to less than five percent after that. This is the value of Hyper-Realistic training. At our training laboratory you can test your equipment, your methods, and your tactics - in real world conditions - without the real world casualties.
